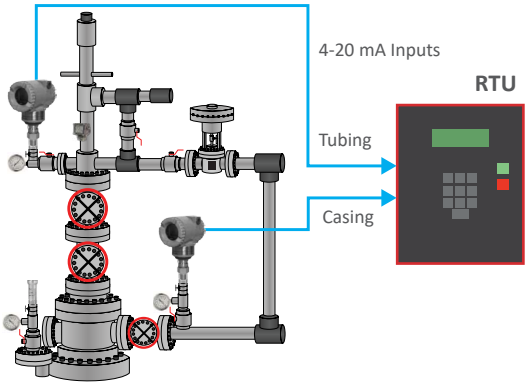
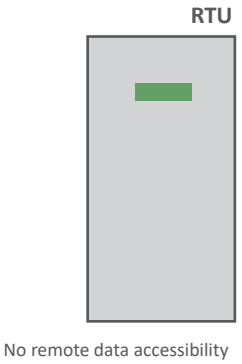
1. Existing Hardwired Setup (Wellhead with 4-20 mA Casing and Tubing Pressure Transmitters)

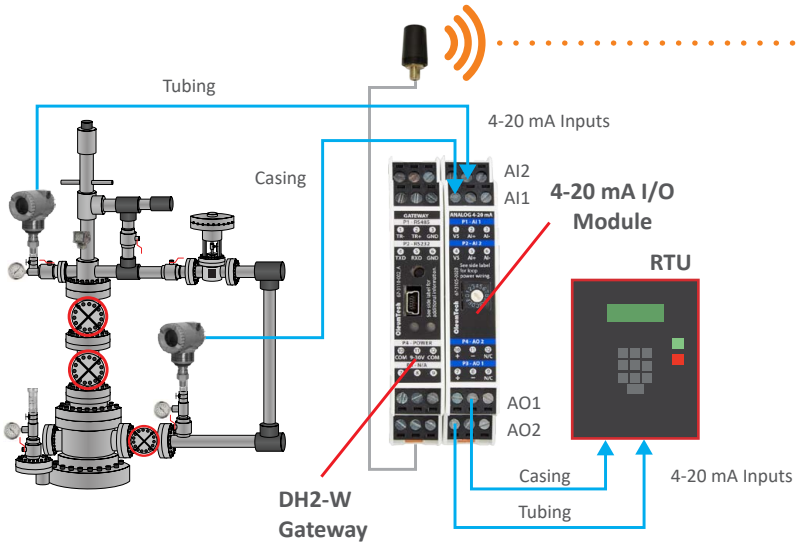
This example of an existing hardwired setup offers no remote data connectivity.

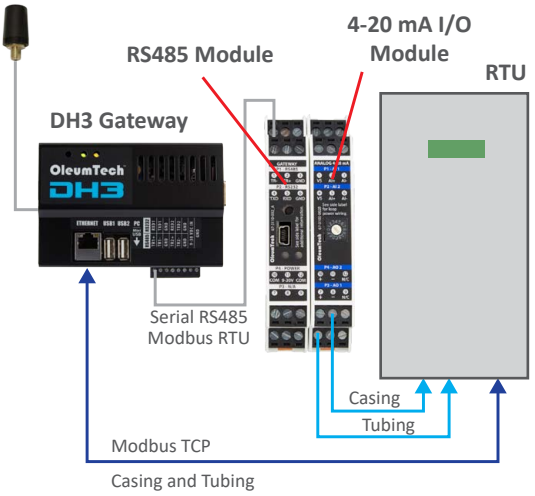




2. Enhancing Existing Hardwired Setup with Remote Wireless Connectivity for Better Process Visibility

This example of a wireless system integration illustrates how you can continue the hardwired operation while adding valuable remote data accessibility to one or more locations.





3. Wireless Alternative for New Field Installations

Deploy the OTC Wireless Sensor and I/O Network to gain the flexibility of either bringing in raw AIs and DIs directly to the controller or minimizing the wiring by just using Ethernet and leveraging Modbus TCP.
